SUMMARY

Full-Stack Product Engineer with 2 years of experience building scalable consumer applications and AI-driven agentic workflows. Expertise in modern TypeScript, React, and event-driven backend services to accelerate user experiences and deploy robust and highly available agentic infrastructure.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Ruby, Java, SQL

Frontend: React.js, Next.js, Zustand, Tailwind CSS, WebSockets, SSR

Backend & AI: Node.js, Django, FastAPI, LLM Orchestration, Agentic Workflows, REST/GraphQL

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, CI/CD (GitHub Actions), PostgreSQL, Redis, Playwright

EXPERIENCE

Pegasystems

Boston, MA

Software Engineer (Full Stack / Product)

May 2025 – Present

- Own end-to-end development of Pega Blueprint, an agentic workflow SaaS platform, scaling the system to support **2M+** enterprise workflows
- Built LLM abstraction layer with provider DI, structured output parsing, and centralized retry/fallback, enabling multi-model routing across Blueprint features
- Accelerated initial load times by **75%** (6s to 1.5s) via frontend optimization and backend API/service refactoring
- Led migration from React Context to Zustand, eliminating cascading re-renders across **50+** components
- Slashed backend load by 30%+ and rate limits by replacing client-side polling with WebSocket event streams
- Established WCAG 2.1 accessibility standards across Blueprint, ensuring full compliance for enterprise customers
- Improved engineering efficiency by building harness framework, leading to full adoption of agentic coding framework across Blueprint frontend developers
- Built concurrent async pipelines to parallelize LLM calls across Blueprint sections, cutting end-to-end generation time by over 50%

forREAL

Boston, MA

Software Engineer (Full Stack / Product)

Sep 2024 – May 2025

- Cut Google Maps API costs by **70%** by implementing server-side clustering, caching, and lazy loading
- Developed idempotent Stripe payments backend (Django/Celery), managing **\$120k+ in monthly rent payments** for rent collection, autopay, and identity verification
- Architected highly available Django models/APIs for lease lifecycle and role management, ensuring transactional integrity with an integration test suite for payment flows
- Delivered property management frontend (Next.js), supporting listing display, search, and lease dashboard

Vanta

Remote

Software Engineer Intern (Backend / Full Stack)

Aug 2023 – Feb 2024

- Reduced Stream Chat API costs by **\$500/month** by implementing a Redis-based real-time notification system handling **10k+ daily messages**
- Improved reliability by implementing idempotent Stripe payment flows, processing **1k+ orders**

PROJECTS

Sigdiff: TypeScript API Tooling

- Built a highly optimized npm CLI tool to detect breaking API changes in TypeScript via AST analysis, **shipping at ~8KB**
- Designed a pipeline (extract, diff, classify, format) using the TypeScript Compiler API

Remes (remes.so): AI-Powered Sales Platform

- Chained LLM extraction, streaming SSE, and third-party APIs with **parallel execution** to enrich contacts
- Designed Next.js architecture with Zod-validated APIs, auth middleware with rate limiting, and semantic theming
- Designed Zustand state coordinating async workflows with optimistic updates, abort, and auto-persisted sessions

EDUCATION

Boston College

Bachelor of Arts in Computer Science, GPA: 3.7

Chestnut Hill, MA

May 2024
